PROJECTS

Courier Management [Mini Project]

An interactive software which involved collecting, delivery and tracking the parcels from the customer. It involved all of the operation in the Database Management System and used an effective role of Customer Id which helped to track all the orders. It showcased all the key features of an efficient database model.

Vaccine Registration [Mini Project]

An efficient system which mainly deals with the issues concerned about the appointments of various types of vaccine available. It solves the delay issue and helps in an early booking system.

Flashlight App [Mini Projects]

This project is about simple android application that can turn on and off flashlight or torchlight by clicking the button. So, the user by touching the button symbol can able to on and off the flashlight very easily.
